

LUND UNIVERSITY

Department of Biology

Ph. D. Jep Agrell

Compulsory Course for Work with Laboratory Animals

Students aiming to work experimentally with research animals (including all vertebrates, octopuses and lampreys) during their Master's- or Bachelor's Degree Projects need to complete a specific course including animal research ethics, regulations, care-taking/handling etc. This national course is web-based and specific for each animal group (e.g. rodents, fish, etc).

If the course is considered necessary for the student to be able to complete the planned Master's or Bachelor's degree project in Biology or Molecular Biology, the cost for the course is covered by Biology Education.

Biology Education does not cover the cost for this course for students registered on Research Project for International Students or Applied work (Projekt- eller Praktikkurser).

If you and your supervisor agree that you need to complete the Laboratory Animal research course your supervisor applies for your participation in the course by sending the Registration form (see next page) attached to an email to djurutbildning@med.lu.se (the Faculty of Medicine administrates these courses for Lund University) and cc. to jep.agrell@biol.lu.se.

Include the following information in the Registration form (next page >>):

- Name and email
- Personnummer (i.e. civic number) and birth date
- Employment (=Student – important, since this reduces the cost!)
- Name of supervisor and Department
- Kostnadsställe/Billing information - if it is a Degree project put 156401 (otherwise supervisors "Kostnadsställe")
- Course of interest

Lund October 28, 2016

Jep Agrell

On the following page you find the Registration form.

*Note that for some animal groups (e.g. reptiles) the web-course is not yet available. In these cases, the normal procedure is that the student completes the general parts about legislation, ethics etc (i.e. the parts which are not animal-specific) of the rodent course and then gets the specific training in handling animals from the supervisor. **If this is the case, select "Unspecified modules" and below list "Species of interest" in the Registration form (next page). When the module for your species is later available you can take it free of charge.***

Registration form to web-based Laboratory Animal Science Courses at Lund University

To register for any web-based LAS education, please fill in the form below and send to

djurutbildning@med.lu.se

If you do not find your specific species in the list, we ask you to check the box for “Unspecific modules”. You will then be registered for the “Rodents” course, but be requested to take those modules that are more general. There might be lectures to complement the course that you will be summoned for.

To register for the course in “Swedish Legislation and Ethics”, you will need to complement your registration with a certificate of a previous LAS education, i.e. from another country.

The fee is for registering to the course, and not depending on when you complete.

It is needed to cover course development and maintenance.

For registered PhD-students at Medicinska Fakulteten, the fee will be covered by “doktorand-utbildningen”, but we will need the “kostnadsställe” for registration until this is confirmed.

Additional cost might be charged depending on the practical examination.
