Course analysis BINP16 Bioinformatics: Programming in Python
spring 2018

Course leader: Björn Canbäck
Other teachers: Dag Ahrén, Christian Brueffer, Jakob Willforss.

Number of students: 18 registered students

Grades: 2 Fail (U), 1 Pass (G), 3 Pass w distinction (VG).

Evaluation

I. Summary of the course evaluation
Number of answers: 11

Short summary of the result: Overall, the students were very pleased with the course (grade 4.6). The students especially appreciated the teachers, assistants, and course literature, but suggested improvements regarding the exam that was too hard in many students view.

II. Comments from the teachers team
The teachers on the course considered that the course was successful, fun and that no major revisions have to be considered except for the exam (see below).

III. Evaluation of changes made since the previous course
After the previous course, we added some new features of the language. We have also improved presentations and published solutions to all exercises and most of the old exams.

IV. Suggested changes for the next course
We intend to do the exam a little bit less difficult. Please, note that many students passed the exam but still had home assignments to submit at the examination date. Next time we will have submission deadlines for the home assignments.
