Course analysis BIOR49 “Molecular Genetics of Eukaryotes” autumn 2017

Course leader: Marita Cohn

Number of students: 24 registered students

Grades: 2 Fail (U), 12 Pass (G), 10 Pass w distinction (VG).

Evaluation

I. Summary of the course evaluation
   Number of answers: 15
   Short summary of the result: Overall the students were very satisfied with the course (mean grade 3.3, 80% answered grade 3-5). The students especially appreciated the course literature (40% grade 5), the labs, lectures and group work. The students commented that the course lab needs to be better equipped, since there was not enough pipettes and centrifuges. They suggested that handouts could be solely uploaded on the course platform Live@Lund instead of printed and handed out.

II. Comments from the teachers team
   The teachers on the course considered that the course is very interesting and useful for the students. The course would need a second teacher taking a major responsibility, who could act as a backup course leader.

III. Evaluation of changes made since the previous course
   After the previous course we have not done any major changes in the course.

IV. Suggested changes for the next course
   The next time the course is given we probably will have a new edition of the text book.
